BANKING PROCESS CLASSIFICATION FRAMEWORKSM

THE BANKING PROCESS CLASSIFICATION FRAMEWORK

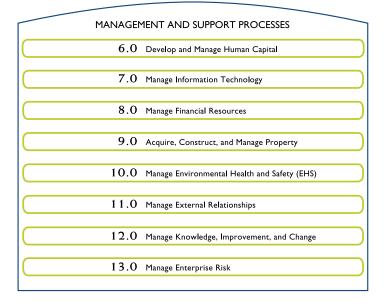

Based on the renowned Process Classification FrameworkSM (PCF), a taxonomy of cross-functional business processes intended to allow objective comparison of performance within and among organizations, and supported by IBM, this industry PCF enables more industry-applicable content by outlining and defining processes and activities specific to the banking industry. This allows organizations to choose the framework most relevant to the specific process improvement need, whether it be benchmarking within or across industries, business process management/re-engineering, or content management. The cross-industry PCF and industry PCFs are available on the APQC Web site at no charge. IBM provided the subject matter expertise and intellectual property to create the industry-specific business process classification frameworks as part of IBM's continuing leadership in the promotion of open standards to help organizations evaluate and measure business processes at an industry level.

THE FRAMEWORK FOR PROCESS IMPROVEMENT

Experience shows that the potential of benchmarking to drive dramatic improvement lies squarely in making out-of-the-box comparisons and searching for insights not typically found within intra-industry paradigms. To enable this beneficial benchmarking, the APQC Process Classification Framework serves as a high-level, industry-neutral enterprise process model that allows organizations to see their business processes from a cross-industry viewpoint.

This cross-industry framework has experienced more than 15 years of creative use by thousands of organizations worldwide. The PCF provides the foundation for the Open Standards Benchmarking CollaborativeSM (OSBC) database and the work of its advisory council of global industry leaders. Each version of the PCF will continue to be enhanced as the OSBC database further develops definitions, processes, and measures. The PCF and associated measures and benchmarking surveys are available for download and completion at no charge from the Open Standards Benchmarking Collaborative Web site at www.apqc.org/OSBCdatabase.

HISTORY

The cross-industry Process Classification Framework was originally envisioned as a taxonomy of business processes and a common language through which APQC member organizations could benchmark their processes. The initial design involved APQC and more than 80 organizations with strong interest in advancing the use of benchmarking in the United States and worldwide. Since its inception in 1992, the PCF has seen updates to most of its content. These updates keep the framework current with the ways that organizations do business around the world. In 2008, APQC and IBM worked together to enhance the cross-industry Process Classification Framework and to develop a number of industry-specific PCFs.

LOOKING FORWARD

The cross-industry and industry Process Classification Frameworks are evolving models, which APQC will continue to enhance and improve regularly. Thus, APQC encourages comments, suggestions, and more importantly, the sharing of insights from having applied the PCF within your organization. Share your suggestions and experiences with the PCF by e-mailing pcf_feedback@apqc.org.

ABOUT APOC

An internationally recognized resource for process and performance improvement, APQC helps organizations adapt to rapidly changing environments, build new and better ways to work, and succeed in a competitive marketplace. With a focus on productivity, knowledge management, benchmarking, and quality improvement initiatives, APQC works with its member organizations to identify best practices; discover effective methods of improvement; broadly disseminate findings; and connect individuals with one another and the knowledge, training, and tools they need to succeed. Founded in 1977, APQC is a member-based nonprofit serving organizations around the world in all sectors of business, education, and government. APQC is also a proud winner of the 2003, 2004, and 2007 North American Most Admired Knowledge Enterprises (MAKE) award as well as the 2008 Global MAKE award. These awards are based on annual studies by Teleos, a European-based research firm, and The KNOW network.

The PCF is written in United States English language format.

ABOUT IBM

IBM works with its clients to develop new business designs and technical architectures that allow their businesses the flexibility required to compete in a global business landscape. The business is also adjusting its footprint toward emerging geographies, tapping into IBM's double-digit growth, providing the technology infrastructure they need, and taking advantage of the talent pools provided to better service IBM's clients. IBM's major operations comprise a Global Technology Services segment, a Global Business Services segment, a Systems and Technology segment, a Software segment, and a Global Financing segment. UNDERSTANDING THE NUMBERING SCHEME

Beginning with Version 5.0.0, the PCF uses a numbering scheme that differs from previous versions. The cross-industry framework and the industry-specific frameworks collectively form a library of process

MANAGEN	1ENT AND SUPPORT PROCESSES
6.0	Develop and Manage Human Capital
7.0	Manage Information Technology
8.0	Manage Financial Resources
9.0	Acquire, Construct, and Manage Property
10.0	Manage Environmental Health and Safety (EHS)
11.0	Manage External Relationships
12.0	Manage Knowledge, Improvement, and Change
13.0	Manage Enterprise Risk

elements for the OSBC. Each process element is referred to by two numbers: a number used to locate the content within that particular framework (in the format 1.2.3.4) and a serial number used to uniquely identify the process element across all of the various OSBC frameworks (beginning with 10000).

For example, the process element "1.2 Develop business strategy (10015)" is uniquely identified by the serial number "10015" and the hierarchical reference number "1.2." In industry-specific PCFs, any process element identified as "10015" will have the same scope and definition as a process element of the same number elsewhere, but may be labeled differently.

INTERPRETING THE PCF

Category: The highest level within the PCF is indicated by whole numbers (e.g., 8.0 and 9.0).

Process Group: Items with one-decimal numbering (e.g., 8.1 and 9.1) are considered a process group.

Process: Items with two-decimal numbering (e.g., 8.1.1 and 9.1.2) are considered processes.

Activity: Items with three-decimal numbering (e.g. 8.3.1.1 and 9.1.1.1) are considered activities within a process.

The Banking PCF is based on the cross-industry PCF Version 5.0.0 released in April 2008.
